

Complete Start Bio™ - Planter Box Seed Treatment

Complete Start Bio is an all-in-one planter box seed treatment that places biologicals, nutrition, and flowability agents directly on the seed to aid in singulation and improve seedling growth and vigor. It contains 10 species of plant-beneficial bacteria and fungi. The nutritional load contains nitrogen, phosphorus, sulfur, calcium, magnesium, iron, manganese, and zinc. It also contains an 80/20 blend of talc/graphite.

Incite™ - Blended Phytohormone

Incite is a blend of bio-stimulants containing naturally-occurring and synthetic plant growth regulators and plant hormones known to promote cell division, shoot initiation, and bud formation, and, stimulate chlorophyll synthesis and leaf expansion from cell enlargement. They work with the plant's own natural physiology to stimulate top growth, increase vigor and improve overall plant health.

Argosy™ RF - Adjuvant

Argosy RF is a water soluble, environmentally safe polymer matrix composed of inert ingredients. Argosy RF encapsulates the active ingredient in a pesticide keeping it on the target leaf even through rain events and irrigation. When tank mixed, Argosy RF enhances wetting, adhesion, and facilitates uniform foliar distribution of the pesticide. This increases the effect and the longevity of the products being applied. Argosy allows for longer application intervals, improved pesticide use efficiency, redistribution of active ingredients when moistened, reduction of runoff, and is elastic which give it the ability to cover new growth.

Hype®-X - Early Foliar Nutrition

Productive plants require balanced nutrition for ideal growth and development. Hype-X was created to provide all crops with a foliar supply of readily available nutrients, micronutrients, carbohydrates, and amino acids that are necessary for optimal yields. Hype-X should be applied in conjunction with herbicide applications to ensure that micronutrients are available when they are needed. Incite™ Plant Growth Regulator is an excellent partner product with Hype-X to maximize yield potential.

Chrome® Flex - Foliar Nutrition

ChromeFlex is a combination product of urea and KTS along with KaPre® Spectra-OC and Krystal Klear® AgraMix III chelated micronutrients and combination of other assorted plant health components. This is an excellent product for both the herbicide and fungicide pass on soybeans. Applications on corn should be done during the V5-VT stages of growth and wheat applications can be made from green up to flag leaf. Incite™ Plant Growth Regulator is an excellent partner product with ChromeFlex to maximize yield potential.

Innova Performance Product Application Timing

Innova Product	Benefits	Fall Burndown	Spring	At Planting	v3-v5 Herbicide Pass	Early Fungicide	Late Fungicide
	Complete Start Bio enhances root development while improving germination rates. It incorporates nitrogen-fixing bacteria to supplement applied nitrogen while improving soil fertility and creating a soil environment beneficial for microbes. Seed singulation is enhanced.						
	Incite™ is a blend of bio-stimulants containing naturally-occurring and synthetic plant growth regulators and plant hormones known to promote cell division, shoot initiation, and bud formation, and, stimulate chlorophyll synthesis and leaf expansion from cell enlargement. They work with the plant's own natural physiology to stimulate top growth, increase vigor and improve overall plant health.						
	Argosy® RF is a water soluble, environmentally safe polymer matrix composed of inert ingredients. Argosy RF encapsulates the active ingredient in a pesticide keeping it on the target leaf even through rain events and irrigation. When tank mixed, Argosy RF enhances wetting, adhesion, and facilitates uniform foliar distribution of the pesticide. This increases the effect and the longevity of the products being applied.						
	Hype®-X improves drought and heat stress tolerance. It is formulated with 'Xcelerant' Technology - a blend of 17 L-amino acids to combat drought/heat stress and chelate micronutrients for improved absorption by plants. 100% of the amino acids are free amino acids, making them immediately bioavailable to the plant.						
	Chrome® Flex is a combination product of urea and KTS along with KaPre® Spectra-OC and Krystal Klear® AgraMix III chelated micronutrients and combination of other assorted plant health components. This is an excellent product for both the herbicide and fungicide pass on soybeans. Applications on corn should be done during the V5-VT stages of growth and wheat applications can be made from green up to flag leaf. Incite™ Plant Growth Regulator is an excellent partner product with ChromeFlex to maximize yield potential.
